CENTRAL ILLUSTRATION: 2018 AHA/ACC/AACVPR/AAPA/ABC/ACPM/ADA/AGS/APHA/ASPC/NLA/PCNA Guideline on the Management of Blood Cholesterol

Grundy, S.M., et al. J Am Coll Cardiol. 10.1016/j.jacc.2018.11.003.

CPT is a registered trademark of the American Medical Association. ReeVue by KORR directly measures the concentration of oxygen breathed out by each patient. The patient merely breathes through a simple mouthpiece as all the exhaled air is collected and analyzed. Because there is a direct correlation between oxygen consumed and calories burned (4.813 calories for every milliliter of oxygen consumed), an accurate measurement of oxygen consumption is an effective measurement of calorie consumption. Adjustments for barometric pressure, temperature, and humidity are key to an accurate VO2 measurement. The ReeVue measures these parameters during each routine calibration cycle, then automatically compensates to standard (STPD) conditions. Studies show that this is the ideal circumstance to elicit behavior change. The European Union's ePrivacy Directive (often referred to as the "cookie law") and General Data Protection Regulation (GDPR) places requirements to provide information about, and gain consent for the use of cookies. 17% of them would not have lost weight on the standard "1200 calorie a day" diet. Physicians can screen for abnormally low metabolic rates and pinpoint the precise caloric intake required for weight loss, maintenance, or weight gain. Nutritional Assessments R94.8 High or Low Metabolic Rate. Your KORR representative will be happy to assist you with this next step. You may have an expert program set up within your practice. Abnormal results of function studies of other organs and systems Secondary to: Z71.3 Dietary surveillance and counseling G0447 Intensive Behavioral Therapy for Obesity (see pdf below for details) Download G0447 Code Paper *AMA CPT / ADA CDT Copyright Statement CPT only copyright 2002 - 2013 American Medical Association. Using this measurement it calculates a patient's Resting Energy Expenditure (REE), commonly referred to as a Resting Metabolic Rate (RMR). After approximately 10 minutes, the ReeVue™ will end the test and prompt the tester to enter in patient data to compare patient results to averages. The AMA does not directly or indirectly practice medicine or dispense medical services. Under strict laboratory protocol, the ReeVue can be used to measure basal metabolic rate (BMR). The ReeVue has a simple user interface that assists the operator from start to finish. No training or certification is required. It does not require a computer or software, and even the printer is optional. Everything you need is at your fingertips! The ReeVue performs an oxygen uptake test, which is CPT code #94690. Armed with a proper medical assessment, your patient is now ready to be referred to a weight loss expert. To ensure one is at rest, we recommend the following preparation: Fast for 4 hours prior to testing. Expand the MetaBreather hose to its full length (5 feet) and connect it to the ReeVue™. Is it any wonder patients are frustrated? Weight Management: Medicare Nationally Covered Indications currently reads: "services performed in connection with the treatment of obesity are covered by Medicare when such services are an integral and necessary part of a course of treatment for diseases such as hypothyroidism, Cushing's disease, hypothalamic lesions, cardiovascular diseases, respiratory diseases, diabetes, and hypertension." The AMA* cites that diagnoses codes supporting the medical necessity of Indirect Calorimetry include: E88.81 Metabolic Syndrome E88.9 Metabolic Disorder, Unspecified G47.00 - G47.9 Sleep Disturbances R06.02 Shortness of Breath Z79.899 Long Term Use of Other Medications R94.8 Abnormal results of function studies of other organs and systems (High or low metabolic rate) CPT codes must be accompanied by an appropriate diagnosis code (ICD-10). Relax and avoid distractions while testing. Keep lips sealed lightly around the mouthpiece. In 2006, the Northwestern Comprehensive Center on Obesity tested the RMR of 76 of their female patients. It is desirable to measure a person's metabolic rate at a true resting level. ReeVue has been independently validated at the University of Southern California and Georgia State University. To view those results, click here. If you have any questions about insurance coverage, contact insurance providers directly. Be sure to use only a KORR™ manufactured MetaBreather as use of any other breathing device will not insure accuracy and will void your KORR™ factory warranty. Showing a patient the results of their own metabolic test gives you the opportunity to teach solid scientific principles within the context of their own bodies. It is important that all the air breathed out is analyzed by the ReeVue™. Turn on the ReeVue™ and wait while it automatically calibrates. The patient should be relaxed and breathe normally. The results can then be printed out. Applicable FARs/DARS Apply to Government Use. Fee schedules, relative value units, conversion factors and/or related components are not assigned by the AMA, are not part of CPT, and the AMA is not recommending their use. To download a ReeVue product brochure, click here. Remove any hose or filter during calibration. The machine will indicate when calibration is complete. Yet there were no other indicators that set them apart from those who could lose weight on that same diet. In fact, they probably would have gained from 5 to 32 pounds in one year. Other Indirect Calorimeters require the patient to draw both their inhalation and exhalation through the measurement device located at the patient's mouth. The air they breathe in will pass through the same mechanism as countless patients before them. KORR uses a one-way valve in the disposable MetaBreather mouthpiece. This draws in fresh room air with each inspiratory breath and eliminates concerns about cross contamination. The disposable is thrown away and there is no need to clean equipment between each patient. A mixing chamber is considered the "Gold Standard" for Indirect Calorimetry (more commonly referred to as a Metabolic Measurement.) In the past, this system has been complicated and expensive, making it only practical for ICU's and research departments. KORR advancements in technology make this method feasible for the typical practitioner. Or you may want to refer to a Bariatrician or community based program. Click the button below to view/download the print out Download/View PDF Indirect calorimetry is CPT coded and is covered by Medicare and most insurance providers. Avoid strenuous exercise prior to testing. Applications include nutritional assessments required to treat obesity as well as obesity related diseases such as metabolic syndrome, sleep disorders, diabetes, and thyroid disorders. For more information on the Northwestern Study, view this video A simple 10 minute RMR test can accurately pinpoint how many calories a patient needs to consume to lose weight. The AMA assumes no liability for data contained or not contained herein.
